Computing Overview and Progression

	Term 1	Term 2	Term 3	Term 4	Term 5	Term 6
Year 1	I Program This unit of work introduces the children to algorithms and simple programming. It uses the context of programming physical and virtual toys to perform specific actions. It develops understanding that computers are controlled by sequences of instructions and that computers need more	Term 2 I Write This unit of work introduces the children to basic word processing. They will learn hot to enter and print text as well as save and retrieve work.	Term 3 I Algorithm This unit introduces the concept of algorithms being a set of instructions that can be followed din order to complete a task. Activities are predominately unplugged (away from devices) to support the children's understanding.	Term 4 I Data This unit links with Maths data collection. The children will learn how to collect, organise and represent data using digital graphing tools.	I Model This unit provides the opportunity for pupils to explore how computer models work and that they can be used to represent real or imaginary environments, situations or scenarios. They will begin to understand the differences between representations and their original counterparts, as well as their uses and	Term 6 I Safe Children will use Think U Know's Jessie and Friends to explore the key aspects of e- safety and digital citizenship to prime pupils to engage in smart and safe technology use and online behaviour.
Year 2	precise instructions that humans do. I animate In this unit the children will explore stop frame animation through story telling. The children will explore creating narratives and combining them with images to make their own short animated scenes.	I Mail In this unit pupils will learn about email. They explore how email is transmitted and understand that email can be used to communicate over distances. This will help develop their reading, writing and digital literacy skills as	I Search In this unit, the children will learn how to use the internet to find out answers to questions relating to space and the solar system. They will also learn the importance of verifying he accuracy of information given on	I Blog In this unit, the children will learn how to blog. They will learn that blogs are an online conversation with an audience that responds. The children will develop their writing and digital literacy skills by	limitations. I Program This unit introduces the children to a visual programming language: Scratch. Using the context of art and drawing, the children will be engaged in creatively developing simple animations.	I Safe This unit of work introduces the children to the concept of being 'safe' online. It uses the context of imaginary characters, set in imaginary worlds, to help the children understand the risks associated with

		they read, compose and reply to email communications.	the internet and how to check multiple sources before answering questions.	learning how to craft posts and responses.		sharing personal information online and how to make informed choices.
Year 3	I program This unit of work introduces the children to a visual programming language. Using the context of games development, it will engage the children in creatively developing their own simple animations.	I Simulate In this unit children begin to understand that computer simulations can represent real and imaginary situations. They learn hot to explore simulations, investigate options and test their predictions. They will evaluate simulations and consider their usefulness.	I Network In this unit, children will learn about networks. They explore real-world examples of networks moving on to leaning how digital devices are connected together from networks; computers networks connected together from the internet.	I Data During these lessons, children will learn how information in a database is organised and interrogated. Following a theme of an imaginary travel website, they will use a prepared database to find information about holidays and add records using information found online.	I Connect This unit explores the difference between the internet and the world wide web and involves surfing, searching and evaluating sources. It will teach children how to use the web and search engines safely and effectively.	I Safe Children will learn about suing search technologies effectively, thinking about how results are generated and ranked. They will discuss how to be safe and respectful online and how to recognise and report concerns online,
Year 4	I program Unit 1 This unit extends the children's experience of developing algorithms and programs to solve puzzles. The children will design, write and debug programs to accomplish specific goals.	I animate This unit introduces the children to designing and creating computer animations. The children will explore creating narratives and combining them with artwork to make their own animated stories.	I Mail In this unit children learn to use e-mail to send and receive messages. They learn about communicating over distances and how to use email safely. They will work together on a shared project using email.	I Program Unit 2 In this unit the children explore physical programming 9robotics) using LEGO and Scratch. They will design and build models using Lego and connect to the physical world using Scratch to turn on lights, sense, control motors and make them come to life.	I Data This unit of work introduces the children to the concept of data being represented digitally on computers. They will begin to understand that data is represented using numbers. They will also learn how data is stored and manipulated in databases.	I Safe This unit explores key aspects of e-safety including how and why we communicate, sharing information, trusting online information, keeping personal information private and cyberbullying.
